Frontend Developer

PROFESSIONAL SUMMARY

Frontend Developer with 2 years of experience engineering accessible and high-performance enterprise web applications. Expert in React.js, Next.js (SSR/SSG), TypeScript, and Redux Toolkit. Proven track record of delivering WCAG 2.1-compliant interfaces, optimizing client-side rendering architecture for massive data payloads, and building modular component libraries that accelerate feature delivery timelines while driving measurable business impact.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Python, SQL
Frontend Infrastructure: React.js, Next.js (SSR/SSG), Redux Toolkit, pnpm, Tailwind CSS, SCSS
UI Systems & Tools: Ant Design (antd), Design Systems, Atomic Design, Figma, Storybook
Performance Tuning: Core Web Vitals, Lighthouse, Code Splitting, DOM Virtualization, CDN Edge Caching (Azure Front Door), Vidstack, HLS Streaming, Webpack
Accessibility (A11y): WCAG 2.1 AA Standards, ARIA Landmarks, Keyboard Navigation, Screen Readers
Testing & Observability: Jest, Playwright (E2E), React Testing Library, Sentry
APIs & Auth: RESTful APIs, GraphQL, WebSockets, OAuth 2.0, JWT Architecture
DevOps & Operations: Git, GitHub Actions, Azure CI/CD Pipelines, Azure Boards, Docker, Agile/Scrum

PROFESSIONAL EXPERIENCE

Terawe Corporation

Frontend Developer

Bengaluru, India

Aug 2024 – Present

- Architected a reusable React.js/TypeScript component library by customizing Ant Design (antd) theme tokens and atomic design principles, unifying UI architecture across 3 internal product teams and accelerating feature delivery by 20%.
- Resolved a critical client-side rendering bottleneck on 50,000-item JSON payloads by implementing DOM virtualization (windowing) and React.useMemo optimization, restoring frame rates from 12 FPS to a stable 60 FPS.
- Engineered WCAG 2.1 AA accessibility standards across frontend surfaces, achieving 100% keyboard navigability and reducing user experience support tickets by 15%, thereby increasing overall platform accessibility.
- Built an automated dual-layer testing pipeline combining Jest unit testing—maintaining a strict 85% code coverage—and Playwright E2E automation for complex global state flows, cutting production regressions by 30%.
- Managed cross-functional Agile workflows using Azure Boards. Transitioned development environments to pnpm, accelerating local build times and optimizing dependency resolution.

KEY PROJECTS

SkillUp Ignite C2k (Education Authority, Ireland) | Next.js, Redux, Azure Front Door, Vidstack

- Orchestrated a high-availability media delivery architecture using Azure Front Door CDN and Vidstack. Implemented HLS adaptive bitrate streaming to successfully absorb traffic spikes of 24,000+ concurrent users with zero media buffering.
- Spearheaded a full frontend rewrite using Next.js SSR/SSG and optimized edge-caching strategies, yielding substantial improvements in Core Web Vitals for international users on high-latency European networks.
- Established persistent Redux middleware architectures across 100+ course modules, guaranteeing flawless browser states through complex multi-step enrollment gates and contributing to an estimated 15% increase in successful course completions.

Unified Dashboard (Enterprise Tool) | Next.js, TypeScript, Redux Toolkit, Azure DevOps APIs

- Developed a real-time, responsive enterprise dashboard using Azure DevOps APIs to ingest live metrics for 500+ internal users, incorporating custom deduplication logic that saved 5+ engineering hours per week and boosted daily active user adoption by 65%.
- Designed global state architecture for 50,000+ item payloads using Redux Toolkit with container-level memoization, eliminating unnecessary re-renders across data-heavy tables.

- Implemented robust frontend error boundaries and fallback UI states to gracefully handle silent network failures and third-party API exhaustion (e.g., endpoints returning 200 OK with empty payloads), ensuring uninterrupted user experience.

StackPilot (AI Career Platform) | stackpilot-jext.vercel.app | *React, TypeScript, Gemini AI, Vercel*

- Created an accessible, mobile-responsive client application in React and TypeScript integrated with generative AI for real-time PDF parsing and instant client-side skill profiling.
- Pioneered complex client-side state management to handle real-time generative AI streaming responses, implementing optimistic UI updates and seamless integration of stateless OAuth 2.0 auth sessions.
- Automated distribution workflows to Vercel using custom GitHub Actions CI/CD pipelines, lowering deployment time to under 5 minutes.

EDUCATION & CERTIFICATIONS

APJ Abdul Kalam Technological University

Bachelor of Technology in Computer Science (CGPA: 7.46 / 10)

Kochi, India

2020 – 2024

Certifications: Microsoft Certified: Azure Administrator Associate (AZ-104)
